VENTILATION SYSTEM

Tunnel Ventilated house:

- Removes heat and maintain adequate temperature.
- Removes excess moisture and maintain humidity.
- Maintenance of good litter condition and minimize dust and odor.
- Limits the formation of harmful gases such as ammonia, carbon dioxide.
- Provides fresh oxygen for respiration to meet the bird's metabolic demand.

Resulting:

- Allows higher stocking density.
- Helps to achieve better FCR, improve production, proper care of birds.
- Controls disease and minimize mortality rate.

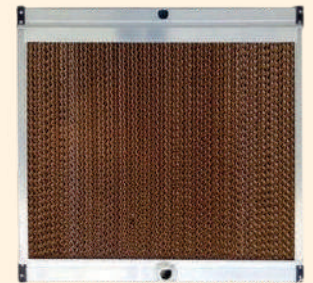

Exhaust Fan:

- 140cm box fan energy efficient and high pressure range up to 120 pa.
- High performance galvanized box fan, compact design, easy to install.
- Blades made of durable polypropylene with fiberglass.
- 3 blade impeller for high efficiency or high volume.
- Interconnected louvers for uniform opening.
- Aerodynamic design for low air resistance.
- AFR at 0Pa 46200 m³/h and at 100Pa 29500 m³/h.

Evaporative Cooling Pad:

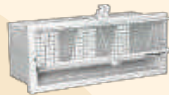

- Material used is Cellulose paper with high evaporation efficiency.
- Super wetting property, low scaling, No water carry over.
- Black CelPad prevents bacteria/mineral deposit on surface.
- Hardened CelPad surface prevents damage while cleaning.
- 1.5 mm thick aluminum framing.

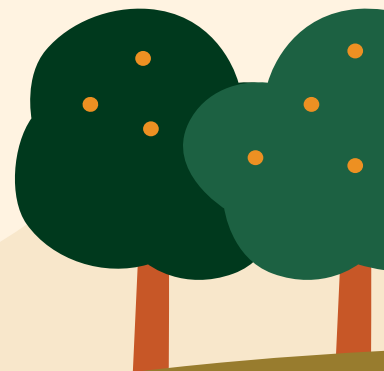

Controller

Diesel Brooder

Air Inlet

NIPPLE DRINKING SYSTEM

- ▶ Floor watering system to provide fresh and clean water and ensure optimum water flow for every birds age.
- ▶ Nipple drinkers allow birds to consume water easily and more comfortably which improve feed consumption and birds growth.
- ▶ Hygiene, prevent water contamination, reduce risk of diseases and Infection.

- Leakage proof.
- SS nipple with high quality polymer housing.
- 60ml/m to 110ml/m water discharge.
- 275 GSM GI pipe for nipple line support.
- Rust proof, high quality suspension system.

AUTOMATIC PAN FEEDING SYSTEM

- Automatic pan feeding system consistently distributes feed to the birds which ensures each bird gets its fair share promoting uniform growth and healthier flock.
- The system allows farmers to set feeding schedules and can be programmed to dispense feed at specific intervals.
- It significantly reduces the need of manual labor in feeding operation specially for large farms.
- The system provides real time monitoring and control capability, remotely adjust feeding schedules and monitor feed levels.

- Special design suitable to feed day old chicks and adult birds.
- Restricts bird entry in pan, help maintain hygiene.
- Big hopper with 180 kg capacity.
- 275 Gsm GI feeding pipe.
- Rust proof, high quality suspension system.
